

BALEAP PIM and ResTES Joint Event

Tracking Foundation, Pre-sessional and EAP Students
&
Qualitative Data Analysis in EAP Research
University of Kent, 25 February 2012

The BALEAP Research Training Event Series aims to build capacity for EAP-related research through creating opportunities for practitioners and researchers to share expertise in the EAP field. Each event explores a different aspect of the process of research (from designing a question to disseminating findings) through input sessions and peer feedback on work-in-progress.

Call for presentations of work-in-progress for the ResTES strand Qualitative Data Analysis in EAP Research

The fourth ResTES event focuses on methodological issues related to qualitative data analysis, as part of tracking EAP student performance or in the context of other EAP-related research projects. Work-in-progress contributions are invited from EAP practitioners and researchers on the following aspects:

- Theoretical frameworks in qualitative data analysis
- Generating a conceptual framework from qualitative data
- Stages in the analytical process
- Using qualitative data analysis software
- Writing about qualitative data
- Qualitative research validity and managing researcher subjectivity in interpreting qualitative data.

Please send 300-word summaries of planned or ongoing qualitative data analysis projects to research@baleap.org by **4 January 2012**. Successful presenters will be invited to provide a full draft at a later date.

For further information about the event see <http://www.baleap.org.uk/baleap/conference-events/restes> or contact research@baleap.org.
